

Mental Health Awareness in Housing Services

Best Practice Series

EYET's Best Practice Series (BPS) workshops are designed for housing professionals interested in more in-depth focus on topics applicable to effective housing help service delivery.

This workshop will focus on improving participants' awareness of mental illness along with providing an approach for working with clients who might be facing these types of challenges. During the session, participants will review signs and symptoms commonly present with certain mental illnesses with the purpose of identification for more effective response. Participants will also engage in discussion about mental health resources and the benefits of partnering with mental health services for successful referrals. Participants will review best practice approaches for tactfully managing interactions with clients and will have an opportunity to hear about The Access Point – single point of access for mental health and addictions support services and supportive housing. Cost to attend is \$90 per participant.

This workshop requires participants to complete a pre-workshop assignment. We will be asking participants to make a list of mental health services in their community prior to attending the workshop.

Eligibility: You must be employed by an agency or organization within Toronto

Date/Time: Wednesday February 5, 2020 from 9:00am to 4:00pm
